

The ADVANTAGE is an improved redesign from any other plastic style basket stretcher available today.

The fully-internal stainless steel frame has a 2500 lb. strength rating while giving a completely smooth sliding surface on the bottom. The outer High Density Polyethylene (HDPE) shell is attached to the top tube, allowing the secondary rail to be completely accessible to provide unlimited options for tying in your patient during the most technical rescue operation.

Generous cut-out sections in the shell provide loads of exposed top rail for handling, and the 7/8" tubing allows for a more comfortable grip. The patient pad is made of closed-cell foam that will not allow fluids to soak into it, and is able to withstand even the harshest cleaning agents. It is attached to allow for it to be removed and replaced if required.

Standard on the ADVANTAGE is our patented StratLoad attachment points.

“StratLoad™” Attachment Points

Our patented StratLoad™ Attachment Points are another example of how Traverse Rescue is leading the way in innovation. These attachment points allow the connection of any size carabiner to the stretcher via the Litter Bridle, but more importantly they allow for the following benefits:

- Top-tube fully protects the clip-in point

- Potential Cross-Gate and Side-Loading of the carabiner is eliminated by no longer having to connect to the top-tube
- Potential crushing of top-tube by too-small a radius in your carabiner is eliminated

Part No.	Description	Width	Length	HEIGHT	Weight	Load Rating
11-0125A	Advantage Basket Stretcher	60cm (23.5")	216cm (85")	19cm (7.5")	13kg (29lbs)	11kN (2500lbs)
