

*Available in Titanium

MAIN FEATURES

- StratLoad™ Feature for vertical lift
- Confined Design -- Allows for entry and egress into most confined spaces
- High Density Polyethylene netting -- attached with shock cord so they will give way when loads are improperly placed & it will not rust
- UHMW-PE Back Support – No more splinters from a wooden back support, and it is extremely durable
- All TIG welded frame construction basket stretcher
- Titanium material is extremely light weight

SPLIT-APART FEATURES & DESIGN

The unique Loc-Safe feature allows for a completely solid connection between the two parts of the stretcher, without the use of pins or tubes sliding into each other. It also allows for a quick and easy visual check to ensure connections are secure throughout an operation. This system of connection allows the stretcher to be assembled or un-assembled in about 15 seconds.

Materials allow it to survive in the most extreme conditions, while the design itself allows for a user-friendly platform.

The 4 patented StratLoad™ attachment points are great for vertical lift.

High Density Polyethylene netting allows water and air to easily pass through the patient compartment, yet the small holes keep from snagging debris.

Also available in 1 piece.
